Note*

The following describes the methodologies and assumptions used to determine the fair values for those financial instruments which are not already recorded at fair value in the Financial Statements:

For financial assets and financial liabilities that have a short term maturity (less than a year), it is assumed that the carrying amounts approximate to their fair value. This assumption is applied to savings deposits without a specific maturity. Loans and advances to customers with a variable rate also considered to be carried at fair value.

The fair value of fixed rate financial assets and liabilities carried at amortised cost are estimated by comparing market interest rates when they were first recognised with current market rates for similar financial instruments. The estimated fair value of fixed interest bearing deposits is based on discounted cash flows using prevailing interest rates of the Bank.
