Summary discussion on adequacy/meeting current and future capital requirements

Overview

A proper "capital management process" is vital in ensuring the long-term stability of the business, the capital adequacy ratio is a measure used to determine whether the Bank has sufficient capital to withstand unexpected losses arising from various risks during the course of the business. Therefore, it acts as a layer of cushion in absorbing potential losses arising from the course of the business and safeguarding the depositors' funds. At present, capital adequacy position of the banks are computed based on banking Act Direction No. 01 of 2016 and subsequent amendments thereto issued by Central Bank of Sri Lanka. SANASA Development Bank has continued to maintain capital adequacy ratios at healthy levels by keeping a significant margin over and above the regulatory minimum

Capital management process

In order to comply with the new Basel III guidelines, SANASA Development Bank's capital management process is under supervision of Board Strategic Planning Committee. The three year (2024-2026) capital management plan rolled out has been integrated with the Internal Capital Adequacy Assessment Process (ICAAP) as well as the Bank's Strategic Plan. Efforts have taken to comply with the Basel III regulations saw the Bank increases its capital levels by issuing Basel III compliant Tier - II debt instruments. Steps were also taken to optimize the capital ratios by rebalancing the risk weighted assets (RWA).

Moving forward

Moving forward with the capital management plan, the Bank will execute specific medium term and long term strategies to raise both Tier I and Tier II capital in line with Basel III minimum regulatory requirements. In addition, timely actions have been identified and will be executed during the coming years to optimize the risk weighted assets for the purpose of improving the capital allocation of the Bank.

These should include

Provide qualitative information on capital planning to meet current and future capital requirements including:
(a) Overview of capital planning and assessment process;
(b) Material risk exposures in line with strategic plan;
(c) Current and future capital needs, anticipated capital expenditure and desirable capital level;
(d) Discussion on possible internal and external capital sources;
(e) Assessment of the adequacy of bank's capital commensurate with all material risks and other capital needs in relation to its current and future activities; General contingency plan for dealing with divergences and unexpected events such as raising additional capital, restricting business activities or using risk mitigation techniques
